

FRAMEWORK INTEGRATION SERVICES

CREATING A TRUE WEALTH MANAGEMENT DESKTOP

BRINGING APPLICATIONS TOGETHER

Framework Integration Services is a set of APIs and services that allow you to create integrated desktop experiences with applications built and hosted by your firm and/or third parties. We offer key integration features such as single sign on, integrated navigation structure, context passing, drill downs and the ability to perform “mash-ups” with multiple applications on the same page.

Integration is now offered as a complimentary service to Thomson ONE Wealth Management customers. Previously a premium offering, Framework Integration Services allows you to integrate internally developed and third party applications, creating a true “Wealth Management Desktop” experience.

Each development team can focus on its core applications while seamlessly bringing all of them together through simple, well documented APIs. Virtually any web-based application can be integrated into Thomson ONE. Retain complete control of how you build, host and release your applications, while leveraging our Framework Integration Services to create a satisfying user experience between various applications.

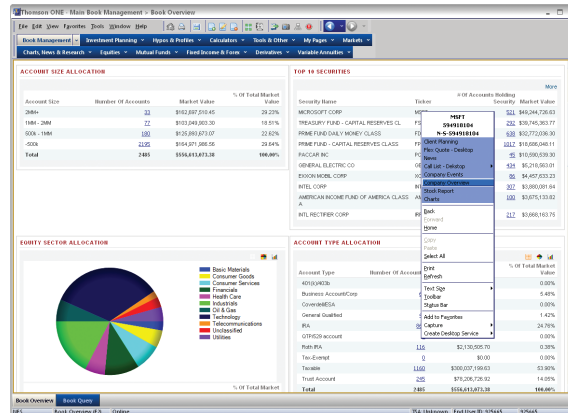

MAXIMUM SUPPORT

Thomson ONE Software Development Kit (SDK), includes detailed, easy to understand documentation covering topics such as:

- Integrating applications into Thomson ONE
- Workspace setup
- Context integration
- Single sign on
- Drill downs
- Enhanced right mouse menu
- Custom authentication and entitlements
- Sample code snip-its
- Example integration scenarios
- Best practices and coding issues

The SDK is available in PDF as well as .MSI format for existing Thomson ONE users.

- Weekly development calls on Thomson ONE with live experts, including open question and answer time.
- On-demand e-Learning sessions of practical Thomson ONE integration scenarios.

Integrated Wealth Management desktop experience

Our Integration Services team is available for a more advanced level of support in their integration project at our standard professional services rates. Thomson ONE has been implemented at the financial industry's largest firms, minimizing project risk and reducing time to market.

TOOLS TO MAKE CONFIDENT DECISIONS

In addition to integrating internal and 3rd party developed applications, Thomson ONE Wealth Management has pre-integrated a number of leading content and workflow tools from Thomson Reuters including:

- Industry-leading Thomson Reuters market data
- Streaming, delayed and global exchanges
- StreetEvents
- Reuters News
- Stock Reports +
- InvestmentView with Lipper Leaders and Award Winners
- Book Dashboard
- Book Connections
- Book Alerts
- Client review and proposal generation
- Asset Allocation
- Financial Planning
- Performance Reporting
- eXimius

BROAD CAPABILITIES, BROAD EXPERIENCE

- Thomson ONE Wealth Management is deployed to over 150,000 desktops
- The largest single client deployment is over 35,000 users
- Over 500 client-developed and 3rd party applications have been integrated
- Thomson ONE supports the delivery of a variety of wealth management content and tools delivered by Thomson Reuters and 3rd parties
- Thomson ONE offers industry-leading Market Data and Reuters News
