

CLINICAL XPERT™ HANDOFF

Clinical Xpert Handoff is a module of the **Clinical Xpert™ Navigator Suite** that helps ensure precise patient handoff from one caregiver to the next.

OVERVIEW: A RELIABLE TRANSITION

Clinical Xpert Handoff from the Healthcare business of Thomson Reuters promotes a streamlined and accurate patient handoff process by enhancing the communication and collaboration among cross-covering physicians and care teams. Handoff provides a centralized location from which clinicians can access a care team's information via mobile device or desktop computer. With Handoff, each member of the team is able to track and edit team configurable handoff information, To Do tasks, and patient problems with complete visibility into comprehensive patient data via Clinical Xpert Navigator.

By eliminating unreliable written communication (often on note pads or sticky notes) and streamlining the handoff process, clinicians can save 1.5 to 3 hours per week. Handoff helps reduce medical errors by increasing the interaction and teamwork among caregivers, facilitating a seamless patient transition between clinicians, units, and shifts.

INTELLIGENT SIMPLICITY

Handoff is completely integrated into the Clinical Xpert Navigator Suite, staying true to Navigator's intuitive interface and convenient mobility features. Additionally, Handoff employs a system that grows smarter with use by storing previously entered To Do items for common tasks that can quickly be recalled and selected.

HOW IT WORKS

Each caregiver subscribes to a census list which identifies the caregiver's patients. The group of caregivers subscribed to a particular census list identifies the handoff team. Subscribing to a census list gives caregivers access to track and edit team-specific handoff information, To Do items, and patient problems on their mobile device or desktop computer.

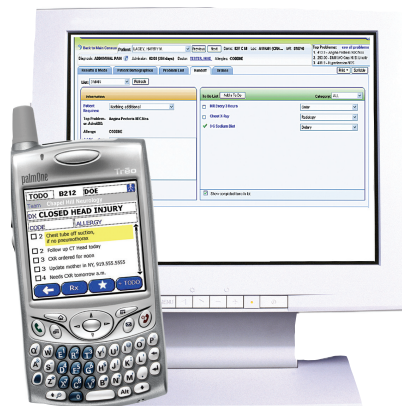

FEATURES

- Fully customizable Info Screen allows teams to define a template of relevant information for their handoff team, so caregivers can easily share and edit this information for each patient.
- To Do list management for sharing and editing patient tasks and organizing tasks by category and completion status.
- Problem List management for historical and current diagnoses.
- Previously entered To Do items are stored for quick re-entry.
- Printable reports for handoff summary, detail, or audit information .

BENEFITS

- Improves communication and coordination of patient care among cross-covering physicians and care teams through a centralized and streamlined handoff.
- Reduces medical errors and duplicate test orders by providing access to treatment plans.
- Supports compliance with The Joint Commission and NCQA guidelines for patient safety and care.
- Allows for faster billing when integrated with Clinical Xpert Charge Capture.

As caregiver roles and responsibilities change, users may join or leave a team by unsubscribing to a particular census list. Users may also subscribe to multiple census lists, or teams, as needed.
