

THOMSON REUTERS INTEGRITY

QUICK GUIDE SERIES: No. 10

HOW TO RETRIEVE CONFERENCE INFORMATION

Missed out on conferences this year? Discover how to use *Thomson Reuters Integrity*SM to find out what happened at the conference you couldn't attend. Benefit from comprehensive event coverage within *Integrity*, and get the latest advances from more than 300 congresses each year.

Use *Integrity* to get alerts on new citations from the latest edition of a particular conference relevant to you, and keep up-to-date with what's new in your area.

This step-by-step guide will show you how to:

- Find specific information from a conference
- Find information related to the conference citations that can be found in the different knowledge areas of *Integrity*
- Build on this information by searching for further relevant citations in *Integrity*
- Set up an alert to be notified when new citations from the latest edition of a particular conference are included in *Integrity*

EXAMPLE SCENARIO: CONFERENCE INFORMATION IN THOMSON REUTERS INTEGRITY

A Molecular Biologist wants to see up-to-date information from a recent conference. A colleague has told her that material regarding the target they are both working on was presented at a conference that she had been unable to attend.

1. SEARCHING FOR SPECIFIC INFORMATION FROM A CONFERENCE

- To find all references associated with a specific conference go to the **Literature Knowledge Area** (FIGURE 1).

Tip:

- To view citations from the most recent meetings, go to the **Conferences** section at the bottom of the *Integrity* homepage.
- Use the **Source** and **Year** fields in the **Congress** drop down menu to set up a search (FIGURE 2).
- The **Index** associated with the **Congress Source** field can be used to find the specific term you need. Searching for the "EORTC-NCI-AACR Symposium on Molecular Targets and Cancer Therapeutics" can be done by entering "EORTC" in the **Lookup** box and clicking Lookup (FIGURE 3). You can select the specific conference from the list of options presented on the right. Click **OK** to copy the term into the search form.
- This search will retrieve all the citations in *Integrity* from the 2010 edition of the chosen conference.
- If you are interested in only the citations associated with products with a certain mechanism of action, this can be included in the search using the Product section (FIGURE 4).
- This again retrieves a results list with the relevant citations (FIGURE 5).

Tip:

- Checkboxes can be used to select specific records which can then be further manipulated using Options such as **Export to Excel** or **Integrity Reports** that *Integrity* makes available for easy data management.

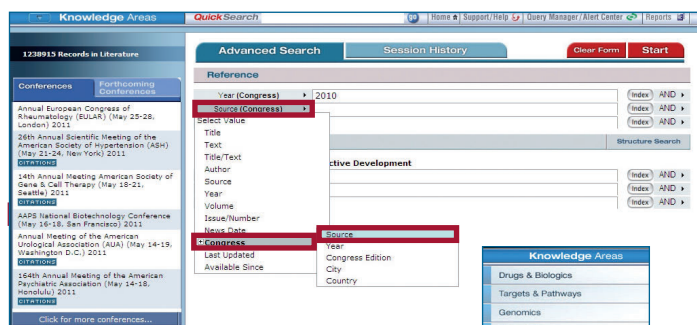

FIGURE 2

FIGURE 1

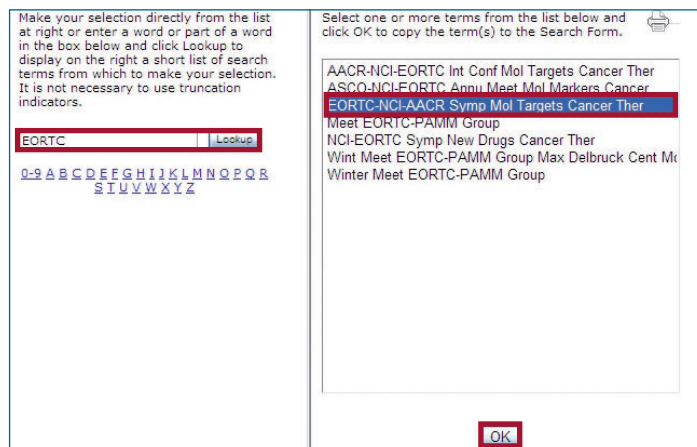

FIGURE 3

THOMSON REUTERSTM

- Where available an **Integrity Summary** button will appear next to the reference citation (FIGURE 5). *Integrity* in-house specialists have analyzed the information and made available a summary of the findings. Click the button to access this information in a separate pop-up window.
- To see information related to the citations that can be found in the different knowledge areas of *Integrity* go to **All Related Information via Quick Search**, which is one of the data management Options. Link to **Drugs & Biologics** to view the drug records associated with these references (FIGURE 6).

Tip:

- To further refine results the **Filter by Statistics** charts can be used. For example, filter by **Development Status** to select only compounds that have reached clinical phases.
- You can explore *Integrity* reference citations to see more literature associated with your area of interest. For example, in the **Literature Knowledge Area** use the Product section to search for references associated with products that have a mechanism of interest. You can specify to see all the citations that have been made available this year (FIGURE 7).

Tip:

- From the results list you can go to the **Options** menu and select **Save Query** to set up an alert and be notified every time a new citation enters *Integrity* that is associated to products with that Mechanism of Action.

2. SETTING UP ALERTS FOR FORTHCOMING CONFERENCES

- You can set up a **Saved Query** alert to be notified when new citations from the latest edition of a particular conference are included in *Integrity*. Set up a search for **Congress > Source = [conference/congress of interest]** and **Year = from 2011**. Your search will not retrieve results if the conference is in the future. You will be given a **Save Query** option (FIGURE 8).
- Fill in the appropriate fields, select an alert frequency and save the alert. You will now be notified when new records that meet your search criteria enter *Integrity* (FIGURE 9).

Tip:

- For information about Forthcoming Conferences to be covered in *Integrity*, refer to the left-hand side of the advanced search form in the **Literature Knowledge Area**. The tabs contain information about recent **conferences** (left tab) and **forthcoming conferences** (right tab) covered by *Integrity*.
